Brain death assessment and determination requires thorough knowledge, as well as technical and interpersonal skills to assure accurate diagnosis and optimize family coping. The goal of this workshop is to provide attendees with a comprehensive experience that will enhance confidence with brain death determination and management.

The target audience includes physicians in neurology, neurosurgery, critical care, trauma surgery or emergency medicine interested in a comprehensive experience that will enhance confidence with brain death diagnosis and management.

NOTE: Registration Limited to 21 Participants. Registration details to follow.
