GENETICS IN CLINICAL CANCER CARE:

Live in Chicago!

JOIN US!

This activity will provide an interdisciplinary educational forum in which to update state-of-the-art science in translational genomics and developmental therapeutics, discuss real-world cases, curate interesting pedigrees and prepare case summaries to disseminate new knowledge and evidence-based clinical management of high-risk patients and their family members. The goal is to improve detection of cancer syndromes and accelerate progress in drug development to prevent cancer morbidity and mortality in **ALL** populations.

TARGET AUDIENCE

This activity has been designed for physicians, physician assistants, advanced nurse practitioners, genetic counselors, oncology nurses, and other health care professionals currently involved in providing cancer genetics risk assessment services or initiating such services in their health care system. Special efforts will be made to meet the needs of clinicians practicing in non-academic centers and geographically and/or socioeconomically underserved communities.
